

Ashwin Kumar

Full Stack Developer, Frontend & UI/UX Focus

ashwin12kumar07@gmail.com | +91 78754 82954 | Pune, India | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

SUMMARY

Full Stack Developer with 1+ years of experience across the MERN stack, AI-powered products, and production UI work. Skilled in React, Node.js, and Next.js, with a real focus on frontend craft and clean backend design. Currently designing interfaces, flows, and motion for marketing pages and console UIs at a Pune-based AI startup, with backend work as needed.

EXPERIENCE

Full Stack AI Developer · Neural Arc · Pune

Jan 2026 – Present

- Design and build interfaces, flows, and animations for marketing and landing pages as well as console UIs, occasionally jumping into backend work when needed.
- Build features for Kashew.ai, an AI-powered CRM with generative AI workflows and multi-step agent automation, built with Next.js and PostgreSQL.
- Build scalable AI infrastructure and RESTful APIs, integrating LLM-driven automation into core product features.
- Mentor junior developers, keep code quality in check, and help guide technical decisions across the team.

Software Engineer (Trainee) · NDSofTech Solutions · Hinjewadi, Pune

Jul 2025 – Dec 2025

- Built full stack MERN applications (MongoDB, Express, React.js, Node.js) across multiple client projects.
- Built reusable React component libraries that made the codebase easier to maintain and sped up feature delivery.
- Improved API handling and frontend rendering performance, and took part in code reviews to keep engineering standards high.

React Developer Intern · Dreams International Pvt. Ltd. · Pune

Nov 2024 – May 2025

- Delivered product features independently, from development through to deployment.
- Turned Figma designs into pixel-accurate React components and worked closely with backend teams to ship complete features.

PROJECTS

Calyx · Next.js · Supabase · Web Crypto API

- A zero-knowledge .env manager with git-style version control and team sharing. Client-side encryption means the server only ever stores opaque ciphertext.
- Even the server operator can't read stored secrets, closing a trust gap that tools like Doppler, Infisical, and Vercel leave open.
- Built an accompanying CLI for managing environment variables directly from the terminal.
